

TMR . . . To Be Pain-Less

FDA Cleared . . . To Lessen Your Pain

Tired of narcotics and painful injections to treat your pain?
Don't want to take your chances with drug addiction or surgery?

TMR is the new FDA Cleared Device for pain after surgery, after trauma--and incredibly, even chronic pain. In TMR, there is no surgery, no drugs, and no needles. There are no narcotic side effects, withdrawal symptoms, or overdose risks. TMR uses pulsed electromagnetic waves which you feel as a gentle tingling sensation. It has been successfully used for years by prominent physicians in thousands of patients from a world renowned Beverly Hills Plastic Surgeon, to a President of the American Orthopedic Society for Sports Medicine. An Executive Director of the National Foundation for the Treatment of Pain noted immediate reduction of swelling, significant reduction in "down time" from injuries, and even dramatic success for fibromyalgia and phantom limb pain, the intractable pain due to traumatic amputation. UCLA's Clinical Trial on TMR confirmed its' effectiveness and professional athletes and sports teams are already using it. It doesn't work on everyone and the number of treatments needed to be effective varies with the cause of the pain, the severity of the pain, and how long you've had it. It does not cure why you have pain and it is not yet covered by medical insurance, though in Pennsylvania, Worker's Compensation TMR treatments were reimbursed. Nevada (and St. George, Utah) physicians may contact Dr. Lee to inquire about obtaining their own TMR Device, as he has been designated the State of Nevada Representative for Scientific Imaginetic's TMR Device Program. To try TMR--to be Pain-Less--call 702-938-0190 for a free consultation . . .

Evelyn, Dr. Lee, Christina, and JoAnne
